Morency,M.-J., Cooke,J., Pavy,N., Parsons,L., Paule,C., Seguin,A.,
/note="Organ: Main stem of 4 year old saplings,
approximately 60 cm tall; Vector: pBluescript II SK (+)
KR, Sitel=1: Eco-RI; Site_2: Xho-I; Tissues were pooled
from above and below the girdle. cDNA was prepared from 5
mg of poly A+ selected RNA and was directionally ligated
into the pBluescript II SK (+) XR vector (Stratagene),
transformed by electroporation into DH10B cells (In
vitrogen) for propagation"
                                                                                                                                                                                                                                                                                                                                                                                                                 181 ATCTGTCACTTCATCAAAAGGACAGTAGAAAAGGAAGGTGGCACCTACAAATGCCATCAT

/note="Organ: leaf; Vector: RescueMu (engineered from pBlueScript backbone); Site 1: BamHi, Site 2: BgJII;
RescueMu is a 4.9 kb; modified maize Mu transposon
designed to allow plasmid rescue from total genomic DNA.
Mu elements insert preferentially into transcription
units. For more information on RescueMu, go to the web
site 'www.zmdb.iastate.edu' and follow the links for
'RescueMu.' Grid M was grown at University of Arizona in
2001. DNA was extracted from leaf punches, double digested
using BamHi and BgIII, and ligated to form circular
plasmids. DH10B cells were transformed and then screened
                                                                                                                                                                                                                                                                                                                                                                                                                                  GSS 17-DEC-2002
